Quantities for Beer & Wine Bar

	<u>50 guests</u>	<u>100 guests</u>	<u>200 guests</u>
<u>Wine .750 btl</u>			
White	12	24	48
Red	12	24	48
Blush	3	6	12
<u>Beer (cases)</u>	4	8	20

Please note that this is based on the average party. Please order accordingly based on your knowledge of your guests. If you are expecting more men than women, you might want to order more beer. Here are some easy hints to help figure beer and wine needed. You get six glasses of wine out of a .750 bottle and there are 12 bottles to a case of wine, which means that you get 72 glasses of wine out of a case of wine.

There are 24 beers to a case. If you are hosting a one-hour beer and wine party for 100 people and the mix is 50 men & 50 women, figure each person, on the high side, is going to have three drinks. That is 300 drinks assume 135 beers / 135 wine and 30 soft drinks. You would need 6 cases of beer / 23 bottles of wine.

We strongly suggest keeping your beer choices to three or four maximum. If you offer too many beers, you run the risk of running out of a type.
